Michael Junior Jere

FULL-STACK SOFTWARE DEVELOPER

C# · ASP.NET Core · React · TypeScript · PostgreSQL · Cloud

PROFILE

Full-stack software developer and founder of MKLabs, building, deploying and maintaining business software for real companies. I design systems end to end: relational databases in PostgreSQL and MySQL, REST APIs and business logic in C# and ASP.NET Core, and responsive front ends in React and TypeScript, deployed on Railway, Vercel, Supabase and Cloudflare. My flagship product, a live multi-user point-of-sale and inventory system, is shaped by more than eight years inside a large retail operation, so I build software that fits how sales, stock and cash actually move through a business. I communicate clearly with non-technical users and take ownership of systems in production.

EXPERIENCE

Founder & Full-Stack Software Developer

Jan 2026 – Present

MKLabs — Bulawayo · Business software, websites, cloud solutions and IT support

- Founded MKLabs to deliver software to local businesses, including point-of-sale and business management systems, company websites, cloud hosting and IT support.
- Architected and built a full-stack POS and inventory system in C#, ASP.NET Core, React and TypeScript, integrating the UI, API and database layers to run real sales, stock and reporting workflows.
- Designed normalised relational schemas in PostgreSQL and MySQL with Entity Framework Core, structured for accurate stock, sales and reconciliation reporting.
- Built REST APIs linking the front end to business logic and data, keeping the system maintainable and ready to integrate with other business tools.
- Implemented authentication and role-based authorisation so every user reaches only the functions and data their role requires.
- Deploy and host production systems on Railway, Vercel, Supabase and Cloudflare, managing domains, subdomains, DNS and SSL certificates for secure, available services.
- Manage all code with Git and GitHub for version control and controlled releases; test, debug and troubleshoot live systems.
- Gather requirements from business owners and translate them into working features, then support and train the people who use them.

EDUCATION

Diploma in Information Technology — Bulawayo Polytechnic College

Jan 2026 – Dec 2027

Certificate in Information Technology — Bulawayo Polytechnic College

Jan 2025 – Dec 2025

PROJECTS

MKLabs POS — Point-of-Sale & Inventory System

pos.mklabs.co.zw

C# · ASP.NET Core · Entity Framework Core · React · TypeScript · PostgreSQL / MySQL · REST · Git/GitHub · Cloud hosting

- **Problem:** small and mid-sized trading businesses need accurate sales, stock and user control without costly enterprise software.
- **Solution:** a multi-user web application with REST APIs, a relational database and role-based access for owners, managers and cashiers.
- **Result:** a live, cloud-hosted system covering sales processing, product and inventory management, and reporting, with stock and reconciliation logic drawn from years of hands-on retail stock control.

MKLabs Company Website

mklabs.co.zw

React · TypeScript · HTML5 · CSS3 · Custom domain & subdomains · SSL

- A responsive, secure production website presenting MKLabs' POS, accounting, school management and lodge management solutions and IT services.
- Designed, built, deployed and maintained end to end, including domain, subdomain and SSL configuration.

EARLIER EXPERIENCE — RETAIL OPERATIONS

Administration and Banking Clerk

Jul 2024 – Aug 2026

Edgars Stores Limited — Bulawayo

- Reconciled daily takings against bank deposits and system reports, and reported variances to management with corrective recommendations.
- Received and issued stock against delivery notes, invoices and requisitions, and coordinated cycle counts and inventory audits against system records.

Customer Service Assistant and Cashier

Jun 2018 – Jun 2024

Edgars Stores Limited — Bulawayo

- Used POS and customer account systems daily, processing high volumes of transactions accurately; promoted in 2024 for reliability and accuracy.
- This hands-on experience as a system user now shapes how I design software: fast, clear and hard to get wrong.

STRENGTHS

- End-to-end ownership, from requirements to production
- Clear communication with non-technical users
- Data accuracy and integrity
- Fast learner of new tools and platforms

AVAILABILITY

- Full-time, contract or freelance
- Remote, hybrid or on-site
- Willing to relocate
- References available on request
